There's no doubt that Silverlight is very interesting to watch in action, but it may be that WinForms is much more of a daily driver. .U.S. Army Special Forces, which are a branch of the military that's known for its tough-as-nails training, have just released a book for kids titled "Scary is as Scary Does," and, frankly, I'm impressed. The book is a broad introduction to the different types of things that the military does, and

while it's one of the scariest things I've ever read, it's also one of the most informative. The book features actual Special Forces soldiers explaining things to kids from age 7 to 12, which means even the youngest readers can get a feel for what being a Soldier is like. It includes a tome on hand signals and phrases to help kids around the world better understand and get along with Soldiers. The book covers topics like, "Why does the U.S. Army do training, and is it to protect us?" and "What happens when Soldiers go away to war?" The book even tells kids, "No matter what, never, ever, be scared. A Soldier will protect you, help you, and come home to you." That's a lot to ask of kids and I think it's something they can really appreciate. For a free PDF of

the book [click here](#) or [below](#).

Renata Castro Renata Castro (born 22 April 1968) is a Portuguese American researcher and faculty member in the Department of Computer Science at the University of California, Berkeley. Her research concerns the design of systems for shared resource allocation. Early life and education Castro was born on 22 April 1968 in Vila Nova de Gaia, Portugal. She came to the United States at age 4. She studied Electrical Engineering at the University of California, Berkeley. Career and research After graduating in 1991, Castro worked in the biological engineering department at Lawrence Berkeley Laboratory. She was an assistant professor of computer science at the University of California, Berkeley from 1997 to 2000. She is the director of the Berkeley Resource Allocation Machines (BRAM) Laboratory and a

professor of computer science at the University of California, Berkeley. Castro's research involves systems where resources may be shared between different types of agents. Her work has covered problems such as multi-agent resource allocation, environmental resource allocation, and set allocation. She has worked
